Canadian Data Report of Fisheries and Aquatic Sciences No. 380

Canadian Data Report of Fisheries and Aquatic Sciences

These reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of Data Reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries management, technology and development, ocean sciences, and aquatic environments relevant to Canada.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was changed with report number 161.

Data Reports are not intended for general distribution and the contents must not be referred to in other publications without prior written clearance from the issuing establishment. The correct citation appears above the abstract of each report.

Rapport statistique canadien des sciences halieutiques et aquatiques

Ces rapports servent de base à la compilation des données de classement et d'archives pour lesquelles il y a peu ou point d'analyse. Cette compilation aura d'ordinaire été préparée pour appuyer d'autres publications ou rapports. Les sujets des Rapports statistiques reflètent la vaste gamme des intérêts et politiques du Ministère des Pêches et des Océans, notamment gestion des pêches, techniques et développement, sciences océaniques et environnements aquatiques, au Canada.

Les numéros 1 à 25 de cette série ont été publiés à titre de Records statistiques, Service des pêches et de la mer. Les numéros 26-160 ont été publiés à titre de Rapports statistiques du Service des pêches et de la mer, Ministère des Pêches et de l'Environnement. Le nom de la série a été modifié à partir du numéro 161.

Les Rapports statistiques ne sont pas préparés pour une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au haut du résumé de chaque rapport.

Kohler, A. Carl, and Linda E. Waite. 1982. Collections of ichthyoplankton identified and enumerated for the year 1980 from the Scotian Shelf Ichthyoplankton Program (SSIP). Can. Data Rep. Fish. Aquat. Sci. 380: iii + 367 p.

ABSTRACT

Kohler, A. Carl, and Linda E. Waite. 1982. Collections of ichthyoplankton identified and enumerated for the year 1980 from the Scotian Shelf Ichthyoplankton Program (SSIP). Can. Data Rep. Fish. Aquat. Sci. 380: iii + 367 p.

Tables identifying, enumerating and specifying areal point of catch and associated technical data are presented for the 1980 phase of the Scotian Shelf Ichthyoplankton Program (SSIP). Station charts for the cruises covering the Shelf from Sydney Bight to Georges Bank are included. Two major tables summarize (1) number of each ichthyoplankton species caught on a particular station, and (2) all stations on which a particular species was found, with numbers on each.

Key words: ichthyoplankton, identified, enumerated, 1980, Scotian Shelf Ichthyoplankton Program

RÉSUMÉ

Kohler, A. Carl, and Linda E. Waite. 1982. Collections of ichthyoplankton identified and enumerated for the year 1980 from the Scotian Shelf Ichthyoplankton Program (SSIP). Can. Data Rep. Fish. Aquat. Sci. 380: iii + 367 p.

Le présent rapport contient, sous forme de tableaux, l'identification, le dénombrement, les lieux de capture et autres données techniques recueillies durant la phase 1980 du Programme d'ichtyoplancton du plateau Scotian (SSIP). Les stations d'échantillonnage des croisières couvrant le Plateau, de la baie de Sydney au banc Georges, ont été portées sur carte. Deux tableaux principaux donnent (1) le nombre de chaque espèce ichtyoplanctonique capturée à une station particulière et (2) les stations où une espèce particulière a été capturée et leurs nombres.

INTRODUCTION

This report for the 1980 Scotian Shelf Ichthyoplankton Program (SSIP) is the third of a series (Kohler and Waite 1982) for the years 1978-80, presenting identification and numerical data in tabular form. Identifications and counts of catches of fish eggs, larvae, juveniles and adults were carried out in the laboratory after the cruises, by contract with Huntsman Marine Laboratory, St. Andrews, and Marine Research Associates, Bocabec, N.B. Collections were made by Marine Fish Division personnel of the Department of Fisheries and Oceans on a series of cruises during 1980 covering the whole of the Nova Scotian Shelf area. All the cruise numbers, dates, and g ars sorted for the 1978-80 SSIP are shown in Table 1 below.

This report contains data for cruises H032, H035, H036. Charts showing stations for each cruise and the tables of identified plankton data generated from each cruise are given in the Appendices. The field and laboratory identification program was initiated by A. C. Kohler in August 1976 on Cruise E.E.P. 170 (M/V E.E. Prince) as an expansion of similar work carried out annually in the southern Gulf of St. Lawrence, during the years 1965-1975.

METHODS

VESSEL

Cruises in 1980 were carried out aboard the M.V. Lady Hammond (chartered research vessel, stern trawler, R.L. 54 m).

GEAR

Two types of gear were towed as a standard during the 1980 surveys. The first was a Bongo MARMAP tow at a speed of 2.2-2.5 knots, and the second Isaacs-Kidd step oblique tow at 5 knots for a half hour. Other types of tows (i.e. neuston and meter net) were carried out from time to time but are not yet sorted so cannot be reported here.

Isaacs-Kidd step oblique tows were carried out by lowering the net as near to bottom as deemed safe, using data from the ship's depth sounder and wire angle-warp length tables. The tow was timed with a stopwatch in six steps, the first being the initial step near bottom for 5 min. The net was then slowly raised one-fifth the distance from the lowest towing depth and towed in these depths for 5 min and so on, until the 30 min tow was finished just below the surface.

Table 1. Cruise numbers, dates and type of sampling gear processed for SSIP cruises carried out in years 1978-80.

Cruise code #	Date	Gears processed
1978		
CC02	May 15-July 15	Oblique Bongo) Divided into 1st and 2nd Meter) leg May 15-June 8/ Neuston) June 16-July 15
H005	Aug. 7-12	Isaacs-Kidd midwater trawl (IKMT) Neuston Oblique Bongo
H006	Aug. 20-Sept. 1	IKMT Neuston Oblique Bongo
H007	Sept. 5-9	IKMT Neuston Oblique Bongo
1979		
H011	Jan. 22-Feb. 2	IKMT Oblique Bongo
H015	April 2-25	Oblique Bongo IKMT
H018	May 14-June 1	IKMT Oblique Bongo
VN01	August 4-19	Oblique Bongo
VN02	Aug. 24-Sept. 10	Oblique Bongo
H025	Sept.24-Oct. 12	Oblique Bongo IKMT
H028	Nov. 12-Dec. 5	Oblique Bongo IKMT
1980		
H032	Feb. 5-27	Oblique Bongo IKMT
H035	May 5-30	Oblique Bongo IKMT
H036	June 2-26	Oblique Bongo IKMT

A standard MARMAP Bongo tow using 2 x 333 Nitex nylon mesh nets was carried out as follows: the ship's speed was varied between 2.2 and 2.5 knots to maintain a 45° wire angle; the wire was let out at 50 m/min and retrieved at 20 m/min; maximum gear depth was 200 m or whatever was safe.

Volumes of water strained were measured for the Bongo tows, using a TSK flowmeter (Tsurumi-Seiki Kosakusho Co. Ltd., Yokohama). For the Isaacs-Kidd tows a formula was used to calculate water strained as follows:

STATION

$$m^3 = \frac{\text{speed x duration}}{60} \times 6080 \times 0.3048 \times \text{area}$$

area of mouth of net in m^3	
Bongo	0.21986
Meter	0.7854
IKMT	2.94650

$$\text{duration} = \frac{\text{tow dur. + sink time}}{60}$$

(Formula devised by D. N. Fitzgerald, a senior Marine Fish Division Technician, in 1978).

The general specifications of the nets were as follows:

1. Bongo net - constructed as shown in McGowan and Brown (1966) - the paired drums had conical tapered nets made of No. 333 Nitex nylon.

2. Isaacs-Kidd net - 6 ft model purchased from Marinovich Trawl Co., Biloxi, Mississippi, No. 471 Nitex codend (Isaacs and Kidd 1953).

PRESERVATION OF SAMPLES

After the tow was finished the nets were thoroughly washed down using saltwater hoses. Samples were routinely placed in 32-oz glass "icebox" jars but, if large jellyfish, juvenile or adult fish were especially abundant, the samples were first washed into a pail. Then the large specimens were recorded and set aside for separate preservation or discarded. All samples were preserved in 5-8% buffered formalin solution.

OCEANOGRAPHIC AND METEOROLOGICAL OBSERVATIONS

Standard physical oceanographic measurements on each station always included a surface water temperature and bathythermograph (BT). Other more detailed measurements of salinity, oxygen and other chemical components of the water column were often taken. These are available on computer tapes at the Marine Environmental Data Service (MEDS) in Ottawa.

Detailed observations on weather and state of the sea were recorded at each station. They are on computer tapes in Marine Fish Division, St. Andrews and Bedford Institute of Oceanography, and at MEDS.

IDENTIFICATION AND DATA STORAGE

Plankton samples were off-loaded and shipped to St. Andrews where sorting and identification procedures were carried out. Protocols for this work are on file at Marine Fish Division, Biological Station, St. Andrews, Huntsman Marine Laboratory, St. Andrews, and Marine Research Associates, Bocabec, N.B. Plankton was sorted and the data recorded on transfer sheets that were passed to Marine Fish Division personnel in St. Andrews. After checking, data were entered into the computer at the St. Andrews Biological Station.

After editing procedures were completed, charts of stations occupied for each cruise for each gear were generated. These are included in two appendices, one each for Bongo and Isaacs-Kidd nets. Each appendix includes five different data tables containing the following information:

(a) species of eggs, larvae, juveniles and adults caught during the cruise;

(b) number of each species of eggs, larvae, juveniles and adults caught by each net on each station;

(c) position of each of various stations on which eggs, larvae, juveniles or adults of a particular species were caught by each net;

(d) cubic meters of water strained at each station calculated from flowmeter readings and/or distance towed by net type;

(e) number of eggs, larvae, juveniles or adults of a particular species caught by station by gear per 100,000 m^3 of water strained.

ACKNOWLEDGMENTS

The persons involved in SSIP from the Marine Fish Division and other scientific groups in Atlantic Canada from 1976 through 1980 and onward are much too numerous to acknowledge each separately. They all played an important part in this production. Special mention should be made of Norman McFarlane's excellent work in helping coordinate details of the program from ship to laboratory to data processing.

Appendix 2, Table 10. Number of eggs, larvae, juveniles or adults of a particular species caught in Isaacs-Kidd nets by station on H035 per 100,000 m^3 of water strained.

(A) NUMBER CAUGHT PER 100,000 CUBIC METERS OF WATER STRAINED (B) NUMBER CAUGHT

LADY HAMMOND 35 May 5-30, 1980

SPECIES: #JUVENILE# 10 ATLANTIC COD (GADUS MORHUA)
